

Ten advantages of 1C-Bitrix over other software platforms.

When discussing a job order for website design, we offer you an optimum (price and quality combination), from our point of view, software product meeting your requirements – 1C-Bitrix. It's main advantages are:

1. It enables you to enhance website functionality whenever needed. This CMS allows fast update and integration of new software modules with no website readjustment.
2. This software product can be easily integrated into the company IT infrastructure. It has big variety of pattern interfaces for different services and departments: Active Directory, Microsoft Office, 1C 8.1: HR Management, import and export of data in different formats.
3. High level information security and integrity.
4. Adaptive interface.
5. Ability to process extensive databases.
6. Successful operation with different API, including Yandex (for flat map design, as presented by the model) and various statistics columns, even if those have been updated.
7. Flexible settings allow CSM optimization for the particular website. It will gear up time of webpage opening (downloading) and ease your server load.
8. Relatively short design time. Widely used website elements (news RSS, catalogues, etc.) are included into the service delivery as Bitrix components.
9. On-line shop design is simplified due to built-in payment system agents and modules enabling customer settings.
10. Technical support service ready to answer all your questions.
